

Dear 2nd Grade Parents,

The summer math assignment for 2nd grade students going into 3rd grade will be completed on a website called "iknowit". It is a web-based math program that was created to review instruction and provide a learning experience that is enriching to all students.

The students will be assigned lessons to review and develop skills in math. We request that the students spend at least 45 minutes a week working on these assigned lessons. They do not need to complete every lesson assigned, but they should be working on these lessons during their weekly 45 minutes. The goal is not the quantity of lessons completed, but the quality of their work.

Thank You,

Mrs. Saladino
